**BOEING REALTY CORP/C6 FACILITY** 4060 LAKEWOOD BLVD 90808 LONG BEACH, CA

Thank you for filing your permit application with the South Coast Air Quality Management District (AQMD).

Every application AQMD receives is screened to ensure that the information it contains is sufficiently complete and accurate to qualify for engineering review. Your application has met these initial requirements and has been accepted by AQMD with the goal of issuing an operating permit or finalizing your plot plan or Emission Reduction Credit. The permit processing engineer assigned to your application will contact you if additional information is required prior to permit issuance.

Application processing time depends on the complexity of equipment, whether toxics are involved, and whether a school is located near your company. Based on our initial review of the information provided in your application, our goal is to process your application within (30/180) days from the date of this letter. An operating permit will be issued if your equipment complies with AQMD requirements.

The name and telephone number of the permit processing team assigned to handle your application appear on the reverse side of this letter, along with the application number assigned by AQMD to your application package. If you have any questions or need additional information about your application, we invite you to contact the assigned permit processing team at the telephone number provided. To ensure prompt service, please be sure to reference your assigned application number when communicating with AQMD staff about your application.
